Computer Classes

In our technological world it is very important that children learn to use the computer from an early age. It prepares them for a bright future and it becomes an integral part of their development. Combine this with the important perceptual, literacy and numeric skills they have to master and the ideal combination are created to give them an immeasurable advantage.

Computer skills such as mouse skills, graphics, basic keyboard, files, printing etc. are taught while perceptual exercises like sorting, puzzles, colouring-in, counting, stories etc, are being mastered in a friendly play atmosphere.

We help children (ages 3½ - 6) to use the computer and at the same time to develop their perceptual, numeric and literacy skills.

- Classes are held at the school during school-hours.
- Courses on pre-primary levels (individual tuition, as not all children work at the same pace).
- Four lessons per month minimum 20 minutes per lesson.
- Each child on his/her own, (learning to work independently).
- Software based on well-known educational books.
- Invest only R90.00 per month in your child's future.

What a wonderful opportunity to give your child the best start in life, absolutely a prerequisite for the GRADE "0" CLASS.

Computer skill classes start as from February 2008.

Please feel free to discuss your children's future with me.

Best regards
Carieen
